

Discretized Geometric Computations using GPUs

Dinesh Manocha
UNC-Chapel Hill
<http://gamma.cs.unc.edu/>

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Arrangement Problems

- **Arrangements**
 - Decomposition of space into connected open cells
 - Fundamental problem in computational geometry and related areas
- **Underlying structure in many geometric applications**
 - Swept Volumes
 - Minkowski Sums
 - CSG or Boolean operations
 - Many more.....

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Basic Computational Pipeline

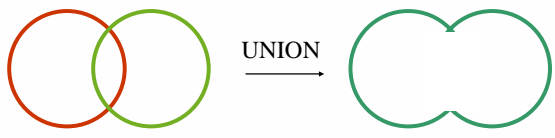

- Enumerate a set S of primitives that contribute to the final surface
- Compute the arrangement $A(S)$ by performing intersection and trimming computations
- Traverse the arrangement and extract a substructure $\delta A(S)$

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Example: CSG Union Operation

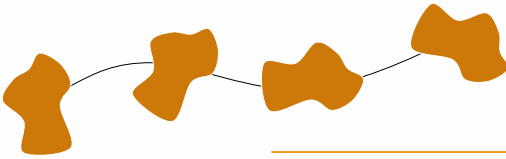

Boundary = outer envelope in the arrangement of the primitives

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Swept Volume (SV)

- Volume generated by sweeping an object in space along a trajectory
- **Goal:** Compute a boundary representation of SV

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

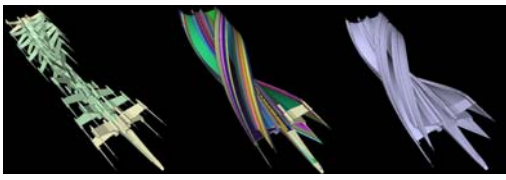

Swept Volume Computation

- Enumerate ruled and developable surfaces
- Boundary of SV = outer envelope of the arrangement

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Swept Volume Computation

- X-Wing Model
 - 2496 triangles
 - 3931 ruled and developable surfaces
 - Intersection curves of degree as high as nine

Sweep Trajectory Arrangement Boundary of SV

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Complexity of Arrangements

- High computational and combinatorial complexity
 - Super-quadratic in number of surfaces
- Accuracy and robustness problems
- No good practical implementations are available

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Approximation Pipeline

- Enumerate surface primitives
- Compute distance fields on a voxel grid
- Perform filtering operations on distance fields
- Use reconstruction algorithms to compute the boundaries of the arrangement

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Approximation Pipeline

- Enumerate surface primitives
- Use GPUs {
 - Compute distance fields on a voxel grid
 - Perform filtering operations on distance fields
- Possibly use reconstruction algorithms to compute the boundaries

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Distance Fields

- Distance Function**
For a site a scalar function $f: \mathbb{R}^n \rightarrow \mathbb{R}$ representing the distance from a point $P \in \mathbb{R}^n$ to the site
- Distance Field**
For a set of sites, the minima of all distance functions representing the distance from a point $P \in \mathbb{R}^n$ to closest site

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagrams

Given a collection of geometric primitives, it is a subdivision of space into cells such that all points in a cell are *closer* to one primitive than to any other

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Ordinary **Generalized**

- Point sites
- Nearest Euclidean distance
- Higher-order site geometry
- Varying distance metrics

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram & Distance Fields

- Minimization diagram of distance functions generates a Voronoi Diagram
- Projection of lower envelope** of distance functions

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

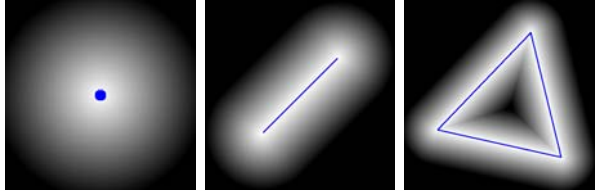

Distance Fields: Applications

- Collision Detection
- Surface Reconstruction
- Robot Motion Planning
- Non-Photorealistic Rendering
- Surface Simplification
- Mesh Generation
- Shape Analysis

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

GPU Based Computation

- HAVOC2D, HAVOC3D [Hoff et al. 99,01]**
 - Evaluate distance at each pixel for all sites
 - Evaluate the distance function using graphics hardware

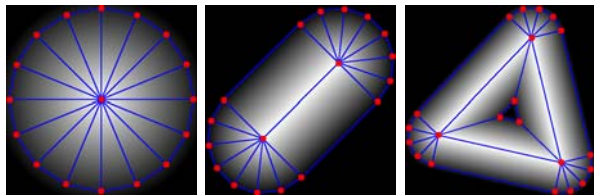

Point Line Triangle

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Approximating the Distance Function

- Avoid per-pixel distance evaluation
- Point-sample the distance function
- Reconstruct by rendering polygonal mesh

Point Line Triangle

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

GPU Based Computation

- Triangular mesh approximation of distance functions
- Render distance meshes using graphics hardware
- Readback the frame buffer

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Meshing the Distance Function

Shape of distance function for a 2D point is a cone

Need a bounded-error tessellation of the cone

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Graphics Hardware Acceleration

- Rasterization to reconstruct distance values
- Depth test to perform minimum operator

Perspective, 3/4 view

Parallel, top view

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Results in the Frame Buffer

Color Buffer

Voronoi Regions

Depth Buffer

Distance Field

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

3D Voronoi Diagrams

- Graphics hardware can generate one 2D slice at a time
- Sweep along 3rd dimension (Z-axis) computing 1 slice at a time

Distance Field of the Teapot Model

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Shape of 3D Distance Functions

Slices of the distance function for a 3D point site

Distance meshes used to approximate slices

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Shape of 3D Distance Functions

Point	Line segment	Triangle
1 sheet of a hyperboloid	Elliptical cone	Plane

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Bottlenecks in HAVOC3D

- Rasterization:**
 - Distance mesh can fill entire slice
 - Complexity for n sites and k slices = $O(kn)$
 - Lot of Fill !
- Readback:**
 - Stalls the graphics pipeline
 - Not suitable for interactive applications

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Distance Field Applications

Application Framework

```

    graph LR
      subgraph GPU
        A[Render Distance Field]
      end
      A --> B[Readback]
      B --> C[Filter Distance Field]
      subgraph CPU
        C
      end
      C --> D[Results]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Distance Field Applications

Reduce fill: Cull using estimated voronoi region bounds

```

    graph LR
      subgraph GPU
        A[Render Distance Field]
      end
      A --> B[Readback]
      B --> C[Filter Distance Field]
      subgraph CPU
        C
      end
      C --> D[Results]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Improved Distance Field Computation (DiFi)

Reduce fill: Cull using estimated voronoi region bounds

- **Along Z:** Cull sites whose voronoi regions don't intersect with current slice
- **In XY plane:** Restrict fill per site using planar bounds of the voronoi region

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Improved Distance Field Computation (DiFi)

Avoid readbacks: Perform distance field application on GPU

```

    graph LR
      subgraph GPU
        A[Render Distance Field]
      end
      subgraph CPU
        B[Filter Distance Field]
      end
      A --> C[Readback]
      C --> B
      B --> D[Results]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

- Within a bounded region, all voronoi regions have a bounded volume

9 Sites, 2D

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

- Within a bounded region, all voronoi regions have a bounded volume
- As site density increases, average spatial bounds decrease

27 Sites, 2D

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

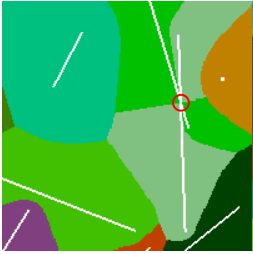

Voronoi regions are connected

- Valid for l_2 , l_{inf} etc. norms

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

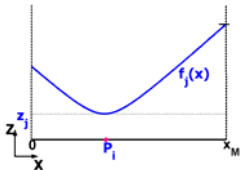

- **Voronoi regions are connected**
 - Valid for l_2 , l_{inf} norms
- **Special cases:** Overlapping features

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

- High distance field coherence between adjacent slices
- Change in distance function between adjacent slices is bounded

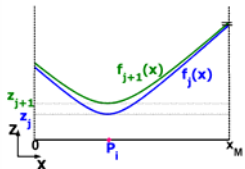

Distance functions for a point site P_i to slice Z_j

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Voronoi Diagram Properties

- High distance field coherence between adjacent slices
- Change in distance function between adjacent slices is bounded

Distance functions for a point site P_i to slice Z_{j+1}

Site Culling: Classification

For each slice partition the set of sites

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Site Culling: Classification

For each slice partition the set of sites using voronoi region bounds

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Site Culling: Classification

For each slice partition the set of sites, using voronoi region bounds:

Approaching (A_j)

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Site Culling: Classification

For each slice partition the set of sites, using voronoi region bounds:

- Approaching (A_j)
- Intersecting (I_j)

The diagram shows a vertical line representing a slice in a 2D space with X and Z axes. A sweep direction arrow points to the right along the Z-axis. Sites S_1 (grey), S_2 (green), S_3 (orange), S_4 (green), and S_5 (orange) are positioned relative to the slice. The regions are labeled A_j (Approaching), I_j (Intersecting), and R_j (Receding).

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Site Culling: Classification

For each slice partition the set of sites, using voronoi region bounds:

- Approaching (A_j)
- Intersecting (I_j)
- Receding (R_j)

This diagram is similar to the previous one but includes the 'Receding' region R_j . Site S_1 is now blue and labeled R_j , indicating it is behind the slice.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Site Culling: Classification

For each slice partition the set of sites, using voronoi region bounds:

- Approaching (A_j)
- Intersecting (I_j)
- Receding (R_j)

Render distance functions for Intersecting sites only

This diagram is identical to the previous one, showing the classification of sites into approaching, intersecting, and receding regions relative to a slice.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Coherence: Adjacent Slices

Updating I_j
 $I_{j+1} = I_j \dots$
 Previously intersecting

The diagram shows two adjacent slices, $Slice_j$ and $Slice_{j+1}$, moving along the Z-axis. The intersecting region I_j is highlighted with a red dashed box, showing how it is updated as the slice moves.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Coherence: Adjacent Slices

• **Updating I_j**

$$I_{j+1} = I_j + (A_j - A_{j+1}) \dots$$

Approaching \rightarrow Intersecting

X
Z Sweep Direction

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Coherence

• **Updating I_j**

$$I_{j+1} = I_j + (A_j - A_{j+1}) - (R_{j+1} - R_j)$$

Intersecting \rightarrow Receding

X
Z Sweep Direction

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Coherence

• **Updating I_j**

$$I_{j+1} = I_j + (A_j - A_{j+1}) - (R_{j+1} - R_j)$$

X
Z Sweep Direction

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Estimate Potentially Intersecting Set (PIS)

- Computing exact intersection set = Exact voronoi computation
- **Conservative Solution:**
 - Use hardware based occlusion queries
 - Determine number of visible fragments
 - Computes *potentially intersecting sites* (PIS) \hat{I}

$$\hat{I}_j \supseteq I_j$$

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Improved Distance Field Computation (DiFi)

- Overview
- Culling Techniques
- Applications
- Implementation and Results

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Application: GPU Computation

Avoid frame buffer readbacks (e.g. HAVOC3D)

```

    graph LR
      subgraph GPU
        A[Render Distance Field] --> B[Readback]
      end
      B --> C[Filter Distance Field]
      subgraph CPU
        C --> D[Results]
      end
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Application: GPU Computation

- Avoid frame buffer readbacks
- Distance field is a 3D grid: SIMD applications suitable for GPU computation

```

    graph LR
      subgraph GPU
        A[Render Distance Field] --> B[Copy to Texture]
        B --> C[Run Fragment Program]
      end
      C --> D[Readback Results]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Application: GPU Computation

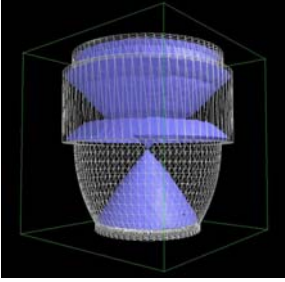

- Size of Results << Size of Distance Field
- Readback cost of results << Readback of Distance Field

```

    graph LR
      subgraph GPU
        A[Render Distance Field] --> B[Copy to Texture]
        B --> C[Run Fragment Program]
      end
      C --> D[Readback Results]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

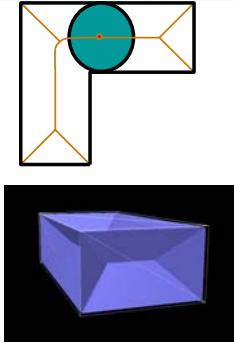

Application to Medial Axis Computation

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Blum Medial Axis

- Locus of centers of maximal contained balls
- Well-understood medial representation
- **Applications**
 - Shape analysis
 - Mesh generation
 - Motion planning
- Exact computation is hard

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

θ -Simplified Medial Axis M_θ

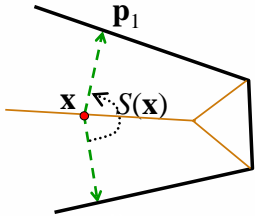

- A subset of the full medial axis M
- Relies on *separation angle* from points on the medial axis to the boundary
- More stable than Blum medial axis

[Foskey, Lin and Manocha 2002]

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Separation Angle

- Angle separating the vectors from x to nearest neighbors
- If more than 2 nearest neighbors, maximum angle is used

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Large Separation Angle

Point is roughly *between* its nearest neighbor points

The diagram shows a red point labeled 'x' positioned between two parallel black lines. Two dashed green arrows originate from point 'x', one pointing to the upper line and one pointing to the lower line, indicating that the point is roughly equidistant to both lines.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Small Separation Angle

Point is *off to one side* of its nearest neighbor points

The diagram shows a red point labeled 'x' positioned to the left of two parallel black lines. Two dashed green arrows originate from point 'x', one pointing to the upper line and one pointing to the lower line. The arrow pointing to the lower line is significantly longer than the one pointing to the upper line, indicating the point is closer to one side.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Simplified Medial Axis

$$M_\theta = \{ \mathbf{x} \in M \mid S(\mathbf{x}) > \theta \}$$

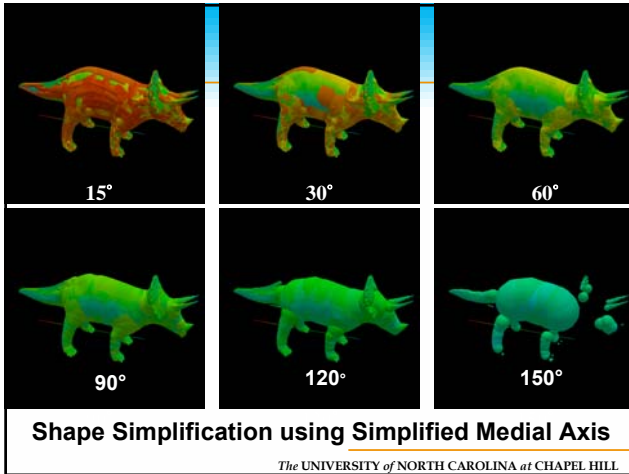

- Start with medial axis M
- Eliminate portions with $S(x) \leq \theta$

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

3D Example: Triceratops

The diagram shows four 3D models of a triceratops, each representing the medial axis at a different threshold value θ . The top-left model is a solid grey triceratops labeled "5600 polygons". The top-right model is a blue wireframe labeled " $\theta = 15^\circ$ ". The bottom-left model is a blue wireframe labeled " $\theta = 30^\circ$ ". The bottom-right model is a blue wireframe labeled " $\theta = 60^\circ$ ". As the threshold increases, more of the triceratops's volume is removed, leaving only the central structural elements.

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Direction Field

- Gradient of Distance Field
- Direction image rendered for each slice (constant z)
- Direction vectors encoded as RGB triples
- Length encoded in depth buffer

- Culling techniques
- Applications
- Implementation and Results

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Simplified MAT Computation with GPU/CPU

Computation using **HAVOC3D** [Foskey et al. 2002]

```

    graph LR
      subgraph GPU
        A[Render Direction Field] --> B[Readback]
      end
      B --> C[Filter: Add Voxel Faces]
      subgraph CPU
        C --> D[Render using Quads]
      end
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Simplified MAT Computation using GPUs

Computation using DiFi [Sud et al. 2003]

```

    graph LR
      A[GPU Render Direction Field] --> B[Copy to Float Texture]
      B --> C[Frag. Prog: Add Voxel Faces]
      C --> D[Volume Render with 3D Tex]
  
```

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Implementation

Dell Workstation with

- Pentium4 CPU at 2.8Ghz
- NVidia GeForce FX5800 Ultra GPU
- 2GB RAM
- Windows 2000

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Results: MAT Computation

Total time =
Time(Direction Field) + Time(Filter Voxels)

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Direction Field Computation

● 4 -20 times speedup over HAVOC3D

Model	Polys	Resolution	HAVOC (s)	DiFi (s)
Shell Charge	4460	128x126x126	31.69	3.38
Head	21764	79x106x128	52.47	13.60
Bunny	69451	128x126x100	212.71	36.21
Cassini	90879	94x128x96	1102.01	47.90

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Filter Voxels

- 2 - 75 times speedup

Model	Resolution	CPU (s)	GPU (s)
Shell Charge	128x126x126	3.50	0.14
Head	79x106x128	0.18	0.08
Bunny	128x126x100	0.68	0.13
Cassini	94x128x96	7.59	0.1

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Filter Voxels: CPU vs. GPU

- Depends on grid size
- 2 - 75 times speedup via GPUs

Model	Resolution	T(CPU) (s)	T(GPU) (s)
Shell Charge	128x126x126	3.50	0.14
Head	79x106x128	0.18	0.08
Bunny	128x126x100	0.68	0.13
Cassini	94x128x96	7.59	0.1

Conclusions

- Discretized geometric computations using GPUs
- Arrangement and envelope computations
- Fast distance field computation
- Application to medial, swept volume and CSG computations
- Benefits
 - Improved performance
 - Robust implementations

The UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

The End
